## Press Release – Three New Members Join Ammonia Europe to Advance Europe’s Clean Ammonia Goals

Ammonia Europe, the industry association representing the European ammonia industry and its value chain, is pleased to welcome three new members: CMB.TECH, ExxonMobil (associated) and Clean Hydrogen Works (associated). Their addition highlights ammonia’s increasing role in driving decarbonisation, energy resilience, and industrial competitiveness in Europe and beyond. Collectively, the new members contribute deep expertise in maritime technology, energy systems, and clean tech innovation - capabilities that are crucial to further scaling up clean ammonia deployment.

- **CMB.TECH** is a maritime group that develops, builds, and operates ammonia-powered vessels, engines, and related infrastructure. It also produces and supplies clean fuels, including ammonia, through its dedicated hydrogen and ammonia value chain activities.
- **ExxonMobil Petroleum & Chemical** is engaged in trading, manufacturing, transporting and selling chemical products, fuels, lubricants, feedstock and other high-quality petroleum products. It is also set to produce and supply low-carbon ammonia to European markets.
- **Clean Hydrogen Works (CHW)** is a clean energy developer specialising in low-cost, low-carbon hydrogen and ammonia production. It builds integrated value chains to enable the large-scale deployment of clean ammonia across industries.

“We’re pleased to welcome CMB.TECH, ExxonMobil Petroleum & Chemical, and Clean Hydrogen Works to Ammonia Europe,” said Stephen Jackson, CEO of Ammonia Europe. “Their strengths across clean ammonia technologies, maritime innovation, and global energy systems will help advance our shared goal of making clean ammonia a critical enabler of a more competitive, resilient and decarbonised Europe.”

### About Ammonia Europe

Ammonia Europe is the voice of the European ammonia industry and its value chain, working to accelerate the role of ammonia in decarbonising energy, maritime transport, chemicals and industry. The association promotes innovation, safety, and evidence-based policymaking, and has developed a voluntary certification scheme to support a transparent and credible clean ammonia market. Ammonia Europe is committed to fostering cross-sector collaboration and building a resilient, climate-neutral economy.
